Search Notes

Examiner Lacourciere,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

To:

Subject:

Please perform the following sequence searches for 09/915,543 in the commercial databases, pre-grant pubs and pending files (interference)

- 1) Residues 177-204 of SEQ ID NO:15
- 2) Residues 349-383 of SEQ ID NO:15
- 3) Residues 199-392 of SEQ ID NO:15

Thank-you!

Karen A. Lacourciere Ph.D.

Vol	luntary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	☐ Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
A	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Co	mments:

Dropoifor sand completed forms to STC/Blotterit Cham Library CMI — Circ. Desk.

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

                                                                                                                                                           This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (1gs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have cytostatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the human legless (1gs) protein homologue 1gs/bcl9 described in the
                                                                     useful in therapeutic method for treating disorders
                                                                                         as cell differentiation or cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The convention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. Invention and the polypeptides, methods of detecting the nucleotides or the invention have homology to known proteins, thereby polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence controlly an insight into their probable biological activities, and hence optential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell family and insight into their publications. The polypeptides of the invention may have various activities, stem cell growth factor activity; inmunomodulatory activity; activity; tissue growth activity; in may be concerned activities, and activities or may be involved in oncogenesis, cancer cell proliferation or metastasis.

CC differation or their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid and promail activities, properties, polypeptides and nucleotides and succerned in general ischaemia bone disorders (e.g., myeloid or lymphoid cell growth. Polypeptides involved with tissue regeneration and repair or proliferative retinopathy, atterosclerosis, corceary heart disease, arterial ischaemia bone disorders (e.g., myeloid or lymphoid cell growth. Polypeptides involved with tissue regeneration and repair or proliferative retinopathy, atterosclerosis, corceary heart disease.

CC disorders), chord in conceding them) may be used to promote wound fungal infections in addition to immune disease or accidental damage. The polypeptides and nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                 AAB71228
                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                        The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity issue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Legless; fruitfly; lgs; Wnt/Wingless signaling pathway; Wnt; Wg; tissue proliferation; tumour; cytostatic; cellular disorder; colon; blood disorder; cancer; breast; head and neck cancer; brain; thyroid; medulloblastoma; skin cancer; tissue regeneration; tissue repair.

This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (1gs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have cytostatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the prosophila melanogaster (fruitfly) legless (1gs) protein described in
useful in therapeutic method for treating disorders as cell differentiation or cell proliferation

WPI; 2002-106308/14. N-PSDB; ABN22347 Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders

Disclosure; SEQ ID 13172; 1037pp; English.

The present invention describes substantially purified human proteins

(referred to as open reading frame, ORFX, where X is 1-11491 (see Table I
in the specification). ABN15762 to ABN27252 encode the human ORFX

c proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
treating or preventing a pathology associated with an ORFX-associated
disorder in humans, and in the manufacture of a medicament for treating a
syndrome associated with ORFX-associated disorder. ORFX polynucleotide
sequences can be used in gene therapy. ORFX sequences can be used in generative disorders, haemorrhage,
c steoarthritis, neurodegenerative disorders, disorders mellitus, systemic
transplantation, cardiovascular diseases, diabetes mellitus, systemic
storage disease, various immune deficiencies and disorders, infectious
diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
disease and autoimmune inflammatory eye disease. ORFX proteins are also
useful for treating burns, incisions, ulcers, for treating osteoporosis,
bone degenerative disorders, or periodontal disease, and for gut

The protein and encoding DNA are applicable in diagnosis and treatment of diseases associated with nuclear localisation of beta-catenin e.g. cancer, including gene therapy. The present sequence represents the amino acid sequence of mouse beta-catenin nuclear localised protein #2.
                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            49.3%; Score 67; DB 23; Length 320; 57.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAU78461;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cancer
                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 8
```

```
The invention relates to human polynucleotides (AA.179941-AA.193841) and the encoded proteins (AA.000010-AA.013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                 Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL57737-ABL30511), and the encoded proteins
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are

isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant)agonists are useful
in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
and ovarian cancer and other cancers of the adrenal gland, bone, bone
marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
(b) immune disorders e.g. Addison's disease, allergies, autoimmune
haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
disease, multiple sclerosis, rhewmatoid arthritis and ulcerative
colitis; (c) cardiovascular disorders such as myocardial ischaemias;
(d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
and parasitic infections.
Note: The sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

ö
quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

       quence of the food-borne pathogen Campylobacter jejuni reveals 1250; MUID:20150912; PMID:10688204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Date: 26-Feb-1999 #sequence_revision 26-Feb-1999 #text_change 10-Dec-1999
C; Accession: T01822
R; Edwards, J; Wollam, C.; Dubbelde, C.
Submitted to the EMBL Data Library, August 1998
A; Description: The sequence of A. thaliana T27D20.
A; Reference number: Z14441
A; Accession: T01822
A; Reference number: Z14441
A; Accession: T01822
A; Residues: Lanslated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-319 < EDW>
A; Cross-references: EMBL: AF076274; NID: 93293583; PID: 93377852

Kramps T., Peter O., Brunner E., Nellen D., Froesch B., Chatterjee S., Murone M., Zuellig S., Basler K.;

Murone M., Zuellig S., Basler K.;

"Wnt/wingless signaling requires BCL9/legless-mediated recruitment of pygopus to the nuclear beta-catenin-TCF complex.";

Cell 109:47-60(2002).

-!- FUNCTION: Involved in signal transduction through the wnt pathway.

-!- FUNCTION: Involved in signal transduction through the wnt pathway.

-!- SUBGELLULAR LOCATION: Nuclear (Probable).

-!- SUBCELLULAR LOCATION: Nuclear (Probable).

-!- TISSUE SPECIFICITY: Detected at low levels in thymus, prostate, testis, ovary and small intestine, and at lower levels in spleen, colon and blood.

-!- DISEASE: Involved in a t(1;14)(q21;q32) chromosomal translocation found in a patient with precusor B-cell acute lymphoblastic leukemia (ALL). This translocation leaves the coding region intact, but may have pathogenic effects due to alterations in the expression level of BCL9. Several cases of translocations within the malignancies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

Lim E.H., Corrochano L.M., Elgar G., Brenner S.;
"Genomic structure and sequence analysis of the valy1-tRNA synthetase gene of the Japanese pufferfish, Fugu rubripes.";
DNA Seq. 7:141-151(1997).
-!- CATALYTIC ACTIVITY: ATP + L-valine + tRNA(Val) = AMP + diphosphate + L-valy1-tRNA(Val).
-!- SIMILARITY: Belongs to class-I aminoacy1-tRNA synthetase family.
-!- SIMILARITY: THE N-TERMINAL DOMAIN IS SIMILAR TO ELONGATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=91080861; PubMed=2175387;

41, Last annotation update)
kinase (EC 2.7.2.7) (BK) (Branched-chain carboxylic
FUNCTION: NOT KNOWN. PROBABLY INVOLVED IN QUINATE METABOLISM.
SIMILARITY: Belongs to the inositol monophosphatase family.
                                                                                                                                                                                                                                                                                                                       0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nature 390:249-256(1997).
-!- CATALYTIC ACTIVITY: ATP + 2-butanoate = ADP + butanoyl phosphate.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the acetokinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bowman S., Churcher C.M., Badcock K., Brown D., Chillingworth T., Connor R., Dedman K., Devlin K., Gentles S., Hamlin N., Hunt S., Jagels K., Lye G., Moule S., Odell C., Pearson D., Rajandream M.A., Rice P., Skelton J., Walsh S., Whitehead S., Barrell B.G., "The nucleotide sequence of Saccharomyces cerevisiae chromosome XIII.";

Biotechnology 14:71-76(1996).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO CELLULASE FAMILY A (FAMILY 5 OF GLYCOSYL
Lin C.T., Lai Y.S., Kuo T.J., Chang T.C.;
"Molecular cloning, expression, and characterization of a cDNA encoding Mn-superoxide dismutase from crab Charybdis feriatus.";
Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.
-1- FUNCTION: Destroys radicals which are normally produced within tells and which are toxic to biological systems.
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Manganese (By similarity).
-!- SUBCELLULAR LOCATION: Mitochondrial matrix.
-!- SUBCELLULAR LOCATION: Mitochondrial matrix.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1997 (Rel. 35, Created)

Gen. Genet. 241:341-350(1993).
-!- FUNCTION: Endoglucanase with some exoglucanase activity.
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.
-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANEOUS: Has a pH optimum of about 7.0 and a temperature optimum about 42 degrees Celsius.
-!- SIMILARITY: BELONGS TO CELLULASE FAMILY A (FAMILY 5 OF GLYCOSYL HYDROLASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-NOV-1997 (Rel. 35, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Unpublished observations (MAY-2002).
-!- FUNCTION: Catalyzes N-methylation of phosphoethanolamine, the phosphomonomethylethanolamine and phosphodimethylethanolamine to three methylation steps required to convert phosphoethanolamine to phosphocholine (By similarity).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + ethanolamine phosphate = S-adenosyl-L-homocysteine + N-methylethanolamine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PER3_ARATH STANDARD; PRT; 490 AA.

                                                                                                                                                                                                                                                                              This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (lgs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have cytostatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the human legless (lgs) protein homologue lgs/bcl9 described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               OPKAPPPPVSSGEPPTLGENPDGLSQEQLEHRERSLQTLRDIQRMLFPDEK

Sequences ABBB10981-ABBB1230 represent 1350 novel human polypeptides, and sequences ABBA0825-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, actioned of detecting the novel polypeptides. Completely of the nucleotides of the invention. Although novel, many of the bild op polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell differentiation activity; activity; tissue growth activity; immunomodulatory activity; tissue growth activities; communomodulatory activity; activity; tissue growth activities; chamchactic or chamchackinetic activities; haemostatic, thrombotic or thrombolytic activities; raceptor or lighned activities; or may be involved in oncogenesis receptor or lighned activities; or may be conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include canners, haematopolestic disorders (e.g., orstoporosis), and abnormal cascular growth. Polypeptides involved with tissue regeneration and cascular growth. Polypeptides involved with tissue regeneration and fugal infections in addition to immune disorders; partivities may be used in the treatment of viral, munuomodulatory activities may be used in the treatment of viral, and fungal infections in addition to immune disorders to manipulate such prowth factor activity and prowed with the search of viral, prowth factor activity and properties with growth. For example, or immuned and cull or prevention or immune or cell cillure to give rise to meuroperies in addition or repetical sections and conditions or repetical activities may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     239 TIVSFHIQNISNNKTERSTAPLNTQISALRNDPKPLPQOPPAPANQDQNSSQNTRLQPTP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or
